3+ years of PHP
commercial Symfony development, some Laravel

Integrations and queues
data exchange between PIM, e-commerce, 1C-Bitrix and 1C over RabbitMQ

2 products in production
Trezo and Layer: backend, infrastructure, CI/CD

I start by figuring out what the business actually needs and agreeing on the approach with the client, then I write code. I use AI tools daily and drive their adoption in my team.

EXPERIENCE

KT.Team — PHP Developer `Sep 2024 – present`

PIM (product information management) system for a large retail chain · team of ~8 developers · Symfony, Pimcore, MySQL, RabbitMQ

- **Requirements.** Gather business requirements, agree on the solution with the client and write specs for the team.
- **Integrations.** Develop product and category exchange between the PIM, e-commerce, 1C-Bitrix (CMS) and 1C (ERP) over RabbitMQ: new flows, logging, bug fixes.
- **Supplier portal.** Develop the portal used by 100+ suppliers: bug fixes and new features.
- **AI in the team.** Write skills for Claude Code and Codex — auto-fixing code review comments, fetching and analyzing tasks, rules for AI code review — and bring approaches such as spec-driven development to the team.

YurtSoft — PHP Developer, part-time `May 2024 – Sep 2024`

A legal document service: the user picks a template, the data is filled in automatically, and the document goes through review and edits. Built the document builder, the review process and access control (Laravel, PostgreSQL).

Sirius — PHP Developer `Jul 2023 – May 2024`

Pharma market analytics based on marketplace data. Built product data collection from marketplaces without a public API, import of Excel spreadsheets with ~1M rows, and AI-based product categorization (Symfony, PostgreSQL).

INDEPENDENT PROJECTS

Trezo — co-founder, lead developer · trezo.one `live since Jul 2026`

Classifieds marketplace for goods and services, built from scratch · Symfony, PostgreSQL, Redis, Next.js, AWS

- **Role.** Led development: owned the backend and architecture, set tasks and reviewed the code of a junior frontend developer.
- **Catalog and search.** Built categories and attribute sets configured in the admin panel without code changes; they drive the listing form and the filters.
- **AI moderation.** Built AI screening of new listings, with borderline ones escalated to a moderator in Telegram.
- **Chat.** Built real-time buyer–seller messaging with deals closed right in the conversation.
- **Development with AI agents.** Set up a workflow on Claude Code, Codex and OpenSpec: each task starts as a spec, agents write code following the project's rules, and the result goes through review plus quality and security checks.

Layer — sole developer · app.layeraudio.ru `live since Oct 2026`

Music sample store: website, Telegram Mini App and author portal · Go, Python, React, PostgreSQL, S3

- **The whole product.** Built from scratch the buyer website and Mini App, plus the portal where authors upload sample packs.
- **Moderation.** Packs go live only after an admin approves them.
- **Payments.** Plan payments via YooKassa, activated by payment notifications, with reconciliation of stuck payments.
- **Infrastructure.** Set up S3 file storage, the server, HTTPS and automated deployment (CI/CD).

SKILLS

Backend	PHP, Symfony, Pimcore, Laravel, Doctrine, REST API, unit/functional tests
Data & queues	PostgreSQL, MySQL/MariaDB, Redis, RabbitMQ, Symfony Messenger
Infrastructure	Docker, Docker Compose, GitHub Actions, S3, Caddy, Git
AI at work	Claude Code, Codex, spec-driven development (OpenSpec), OpenAI API
Also	Go, Python, TypeScript, React, Next.js
Education	Higher education (incomplete)
