3+ years of PHP
commercial development with Symfony and Laravel

From requirements to code
I work with the client and write specifications

Co-founder of Trezo
led development, built an AI-driven workflow

I start by figuring out what the business actually needs and agreeing on the approach with the client, then I write code. I use AI tools every day and I'm the one driving their adoption in my team.

EXPERIENCE

KT.Team — PHP Developer — 09.2024 – present

Product information management (PIM) system for a large retail chain · Symfony, Pimcore, MySQL, RabbitMQ

- **Working with the client.** I figure out what the business needs, agree on a solution and write the spec for the team.
- **Integrations.** Set up automatic exchange of products and categories between the PIM, e-commerce, Bitrix and 1C.
- **Supplier portal.** I maintain and develop the supplier portal: fixing bugs and adding new features.
- **AI in the team.** Introduced AI tools to the team and wrote skills for them: automatically fixing code review comments, fetching and analyzing tasks, rules for AI code review.

INDEPENDENT PROJECTS

Trezo — co-founder, lead developer · trezo.one — 2026

Classifieds marketplace for goods and services, built from scratch · Symfony, PostgreSQL, Redis, Next.js, AWS

- **Leadership.** Led development, owned the backend, mentored a junior frontend developer.
- **Catalog and search.** Every category has its own attributes, and buyers filter listings by them.
- **Auto-moderation.** New listings are checked by AI, with a moderator in Telegram when needed.
- **Chat.** Buyers and sellers message in real time and close the deal right in the conversation.
- **Spec-driven development.** Built a workflow with AI agents (OpenSpec): every task starts as a spec, agents write code following the project's rules, and the result passes quality and security checks.

Layer — sole developer · app.layeraudio.ru — 2026

Music sample store: website, Telegram Mini App and author portal · Go, Python, React, PostgreSQL, S3

- **The whole product.** Single-handedly built from scratch the website and Mini App for buyers, plus the portal where authors upload their samples.
- **Moderation.** Every uploaded sample is reviewed before it appears in the store.
- **Payments.** Subscriptions paid through YooKassa.
- **Infrastructure.** Set up S3 file storage, the server, HTTPS and automated deployment (CI/CD).

PREVIOUS EXPERIENCE

YurtSoft — PHP Developer, part-time — 05.2024 – 09.2024

A legal documents service: the user picks a template, the data is filled in automatically, and the document goes through review and edits. Built the document builder, the review process and access control (Laravel, PostgreSQL).

Sirius — PHP Developer — 07.2023 – 05.2024

Pharma market analytics built on marketplace data. Built product data collection from marketplaces without a public API, import of Excel spreadsheets with ~1M rows, and AI-based product categorization (Symfony, PostgreSQL).

SKILLS

Backend	PHP, Symfony, Pimcore, Laravel, Doctrine, REST API, unit/functional tests
Data & queues	PostgreSQL, MySQL/MariaDB, Redis, RabbitMQ, Symfony Messenger
Infrastructure	Docker, Docker Compose, GitHub Actions, S3, Caddy, Git
AI at work	AI assistants and agents in development, spec-driven development (OpenSpec), OpenAI API
Also	Go, Python, TypeScript, React, Next.js
